INDIVIDUAL FRONT EXIT FREE STALLS FOR LARGE CATTLE

Specially designed to limit stress to the animals, front exit free stalls reduce the risks caused by direct contact with the animals. With the addition of a transfer gate, the possibility of sorting and classifying the animals with a single operator ensures good profitability.

DOUBLE BACK GATE

As a replacement for the transfer gate, the double back free stall gate allows the animal to be isolated quicker than with the usual back chains. This gate forces the animals to be classified two by two in single lines.

BACK ANTI-REVERSING DEVICE

Free stall back anti-reversing devices, when used with the transfer gate, enable animals to be classified in free stalls in calm conditions with minimal intervention by the personnel.
