

## SAFETY AND HANDLING EQUIPMENT

### SHEET METAL FENCE / MOVEMENT CORRIDOR for large cattle

Formed of two 1.80m high partitions, 0.20m clear of the ground, panelled to 1.40m.

With its covering of three anti-overlap tubes fitted with an anti-reversing device, it prevents the animals turning round.

### TRANSFERT GATE

Guided by 4 trolley wheels, it runs on an "I" section rail firmly fixed to the back of the free stalls. Its bilateral single control locking gives it the necessary stability. It invites the animal to enter the free stall.

### ANTI-REVERSING DEVICE

It can be fitted in all corridors from 0.70m to 1.00m; it is simple and reliable and is operated by the animal alone.

### PASSAGE CROSSER

With the addition of an anti-reversing device, it allows animal movement to be stopped at any time so that personnel can cross the corridor in complete safety.
